DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I, consisting of claims 1-25 drawn to an image acquisition system, classified in class 378, subclass 62, in the reply filed on 7/21/2004 is acknowledged.
2. This application is in condition for allowance except for the presence of claims 26-51 that are directed towards a non-elected invention (See Restriction Requirement), as explained further below. Accordingly, claims 26-51 have been cancelled.

Allowable Subject Matter

3. Claims 1-25 are allowed.

As per claims 1-25, the prior art of record fails to teach or adequately suggest a programmable image data acquisition system comprising a programmable detector-framing node which receives image data output from an image detection system and which communicates this data to a host memory. This feature, in combination with a feature wherein the programmable detector-framing node is selectably programmable by reading a programmable memory unit after power is initially applied to the programmable detector-framing node, in combination with the other claimed features and or limitations as claimed by the claimed invention, is not taught or rendered obvious by the prior art of record.

Conclusion
